Your Code

```c
#include <stdio.h>
#include <limits.h>

int max(int a, int b) {
    return (a > b) ? a : b;
}

int eggDrop(int eggs, int floors) {
    int dp[eggs + 1][floors + 1];

    for (int e = 1; e <= eggs; e++) {
        dp[e][0] = 0;
        dp[e][1] = 1;
    }

    for (int f = 1; f <= floors; f++) {
        dp[1][f] = f;
    }

    for (int e = 2; e <= eggs; e++) {
        for (int f = 2; f <= floors; f++) {
            dp[e][f] = INT_MAX;

            for (int x = 1; x <= f; x++) {
                int attempts = 1 + max(
                    dp[e - 1][x - 1],
                    dp[e][f - x]
```

Input

```
2
10
```

Output

```
4
```

```
                    dp[e - 1][x - 1],
                    dp[e][f - x]
                );

                if (attempts < dp[e][f])
                    dp[e][f] = attempts;
            }
        }
    }

    return dp[eggs][floors];
}

int main() {
    int eggs, floors;

    scanf("%d", &eggs);
    scanf("%d", &floors);

    printf("%d\n", eggDrop(eggs, floors));

    return 0;
}
```
